## IgGs and Secondary Antibodies

LAMPiRE has an extensive line of IgGs and secondary antibodies designed for use in lateral-flow, ELISA, and other immunoassays. Purified immunoglobulins and secondary antibodies are offered in small package sizes specifically for research use. These products perform in a variety of applications and are available unconjugated or conjugated to Alkaline Phosphatase (Alk Phos), Biotin, Fluorescein Isothiocyanate (FITC), and Horseradish Peroxidase (HRP). In addition, fluorochromes such as Cy2, Cy3, Cy5, Texas Red, TRITC, and more are also available for use in flow cytometry, confocal microscopy, or multi-color western blot. Bulk pricing available.

Gamma Globulin fractions of IgGs reduce background interference, while Affinity Purified IgGs and secondary antibodies are used as controls or to provide assay signal. Lot sizes are large enough to support assay development and production. Compliant with European Community Regulation (EC) No. 1069/2009 & Regulation (EU) No. 142/2011.
